How to unlock the power of digitalization

Key digitalization challenges for players in the shipping market

ADAPT

to market and financial pressures

PRIORITIZE

the value of faster, greater streams of data

SECURELY SHARE

information and working in new ways

ALIGN & OPTIMIZE

new technologies with an ageing infrastructure

Data is the new raw material of business

What digitalization means for the shipping industry

DNV GL knows how to unlock the power of digitalization

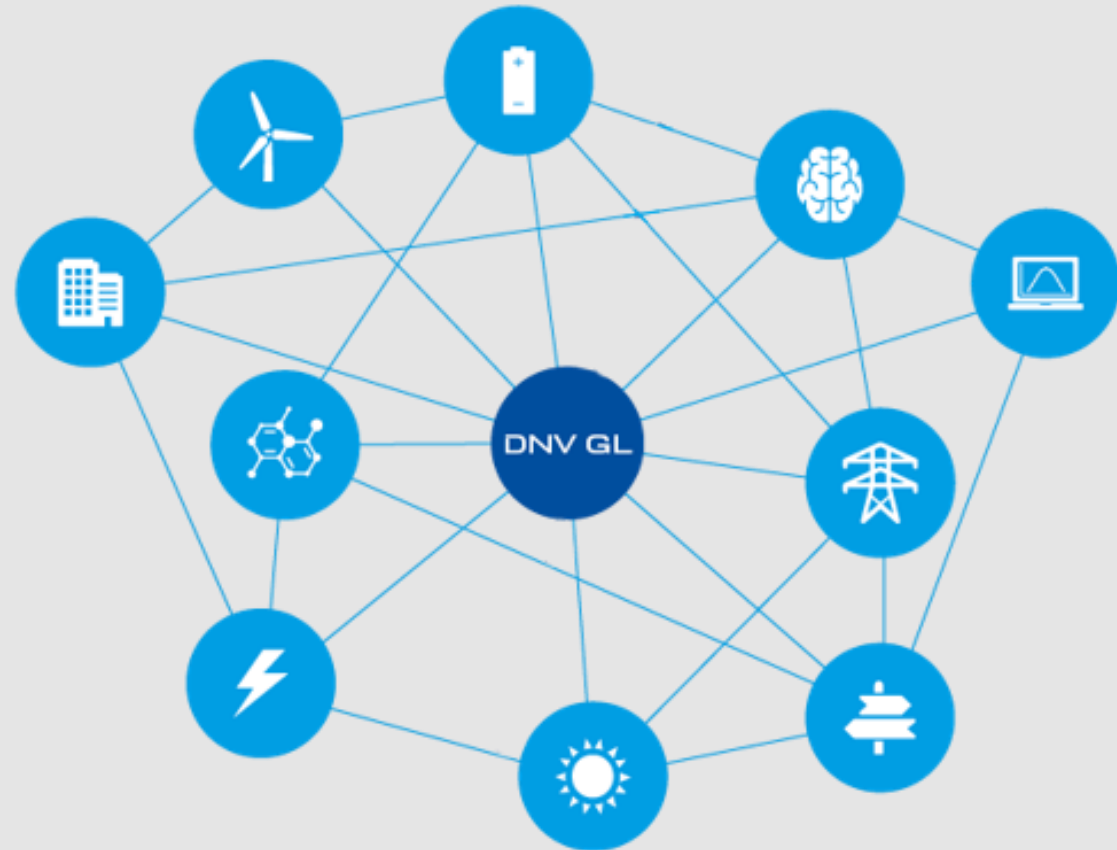

DNV GL provides first-class solutions to meet customer challenges

Maximise revenue

Optimise efficiency

Reduce operational costs

Manage risks

DIGITAL TWIN: dynamically track asset condition and performance

PRECISE MODELLING
using accumulated data

INCREASED VALUE
with predictions and
optimization

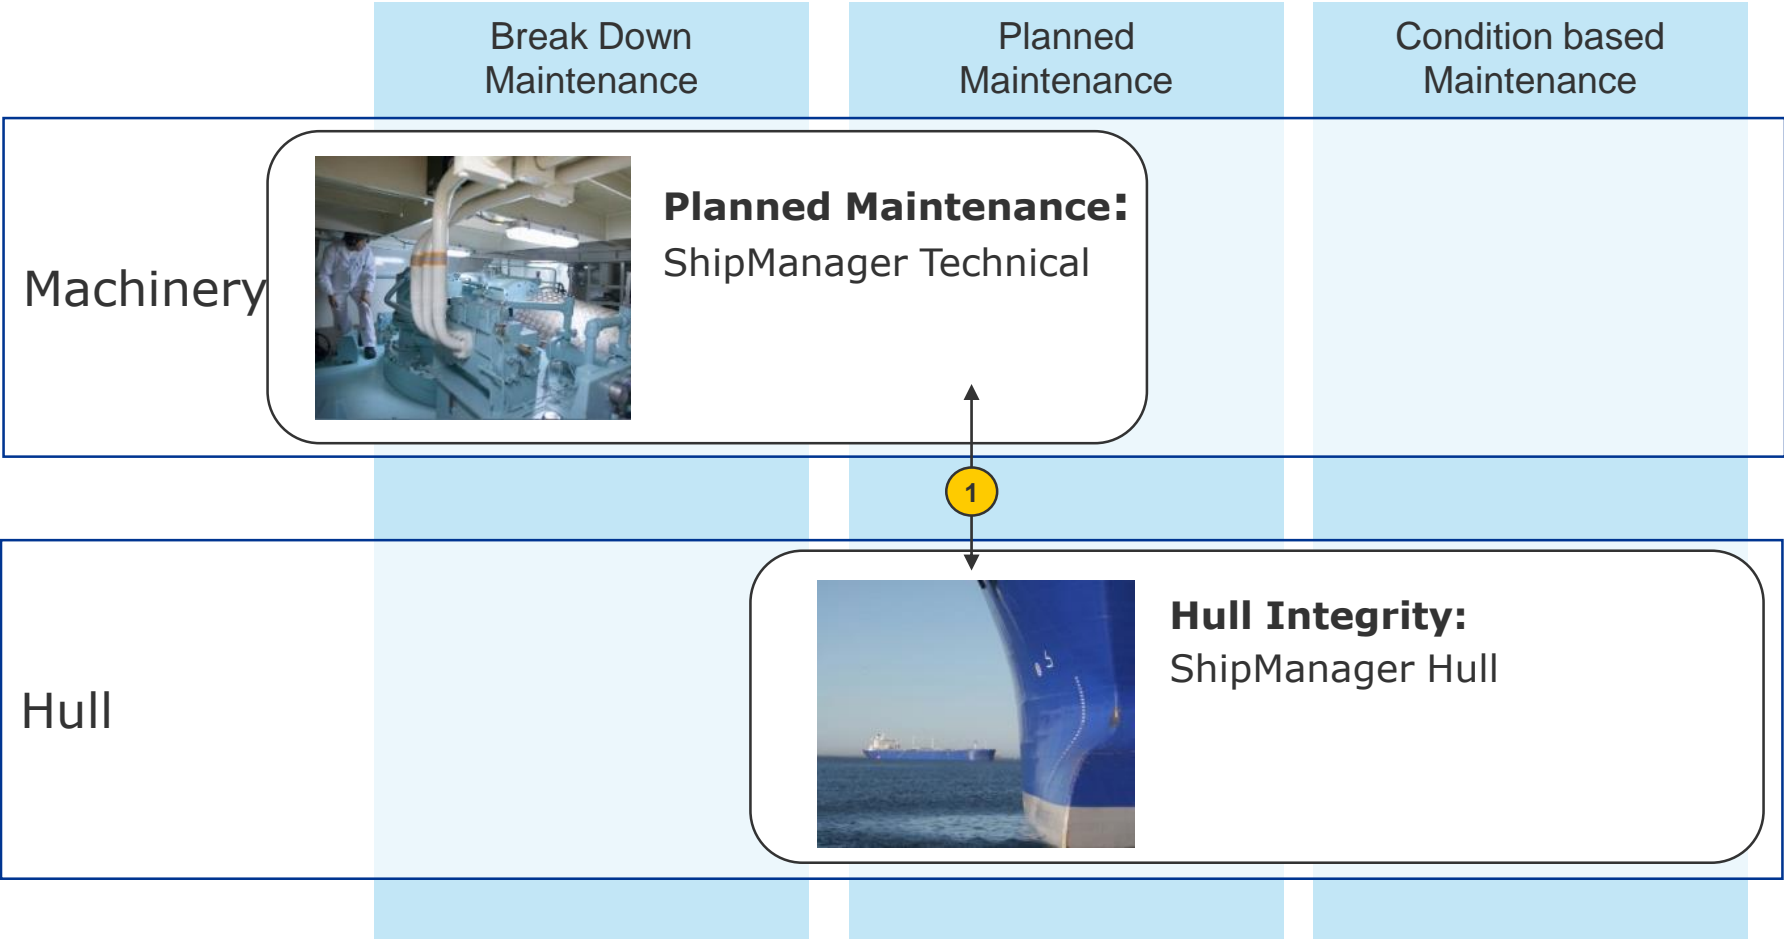

FORECASTING
future results and needs

DNV GL's digitilization solution for ship management and operations. The most innovative in the industry.

Ship Management	 <p>ShipManager Technical Easy-to-use planned maintenance system with fleetwide technical asset management</p>	 <p>ShipManager QHSE Quality/safety management support for documentation, audits, inspections, findings, incidents, certificates and safety tasks</p>	 <p>ShipManager Procurement Complete procurement and stock control solution for all purchase activities in shipping companies</p>
	 <p>ShipManager Projects Supports dry dock and other projects with planning, tendering and project management</p>	 <p>ShipManager Crewing Supports full crew management incl. planning, dispositioning, certificates, appraisals., rest hours, ...</p>	 <p>ShipManager Analyzer Business Intelligence solution, gets information out of your different operational data for flexible and powerful reporting and analysis</p>
	 <p>ShipManager Hull Advanced hull integrity solution supports inspections and thickness measurements based on interactive 3D ship –specific model</p>	 <p>ShipManager Survey Simulator Training and guidance for hull inspections based on interactive 3D vessel models</p>	 <p>Integrations ShipManager integrates with other key business systems such as Accounting / Finance / ERP or Document Management Systems / Sharepoint</p>
Ship Operations	 <p>Navigator Port The Master's digital assistant for port clearance, port information, passage planning work & rest records etc.</p>	 <p>Navigator Insight Onboard voyage reporting tool with intelligent data verification and onshore distribution features</p>	 <p>ECO Insight Portal for fleet performance analysis and optional expert advice (Maritime Advisory)</p>

Building the foundation for a more advanced technical management

1 Central task management in ShipManager possible, as arising maintenance jobs will be exchanged

Smart Hull Integrity Management - Supported by digital 3D model

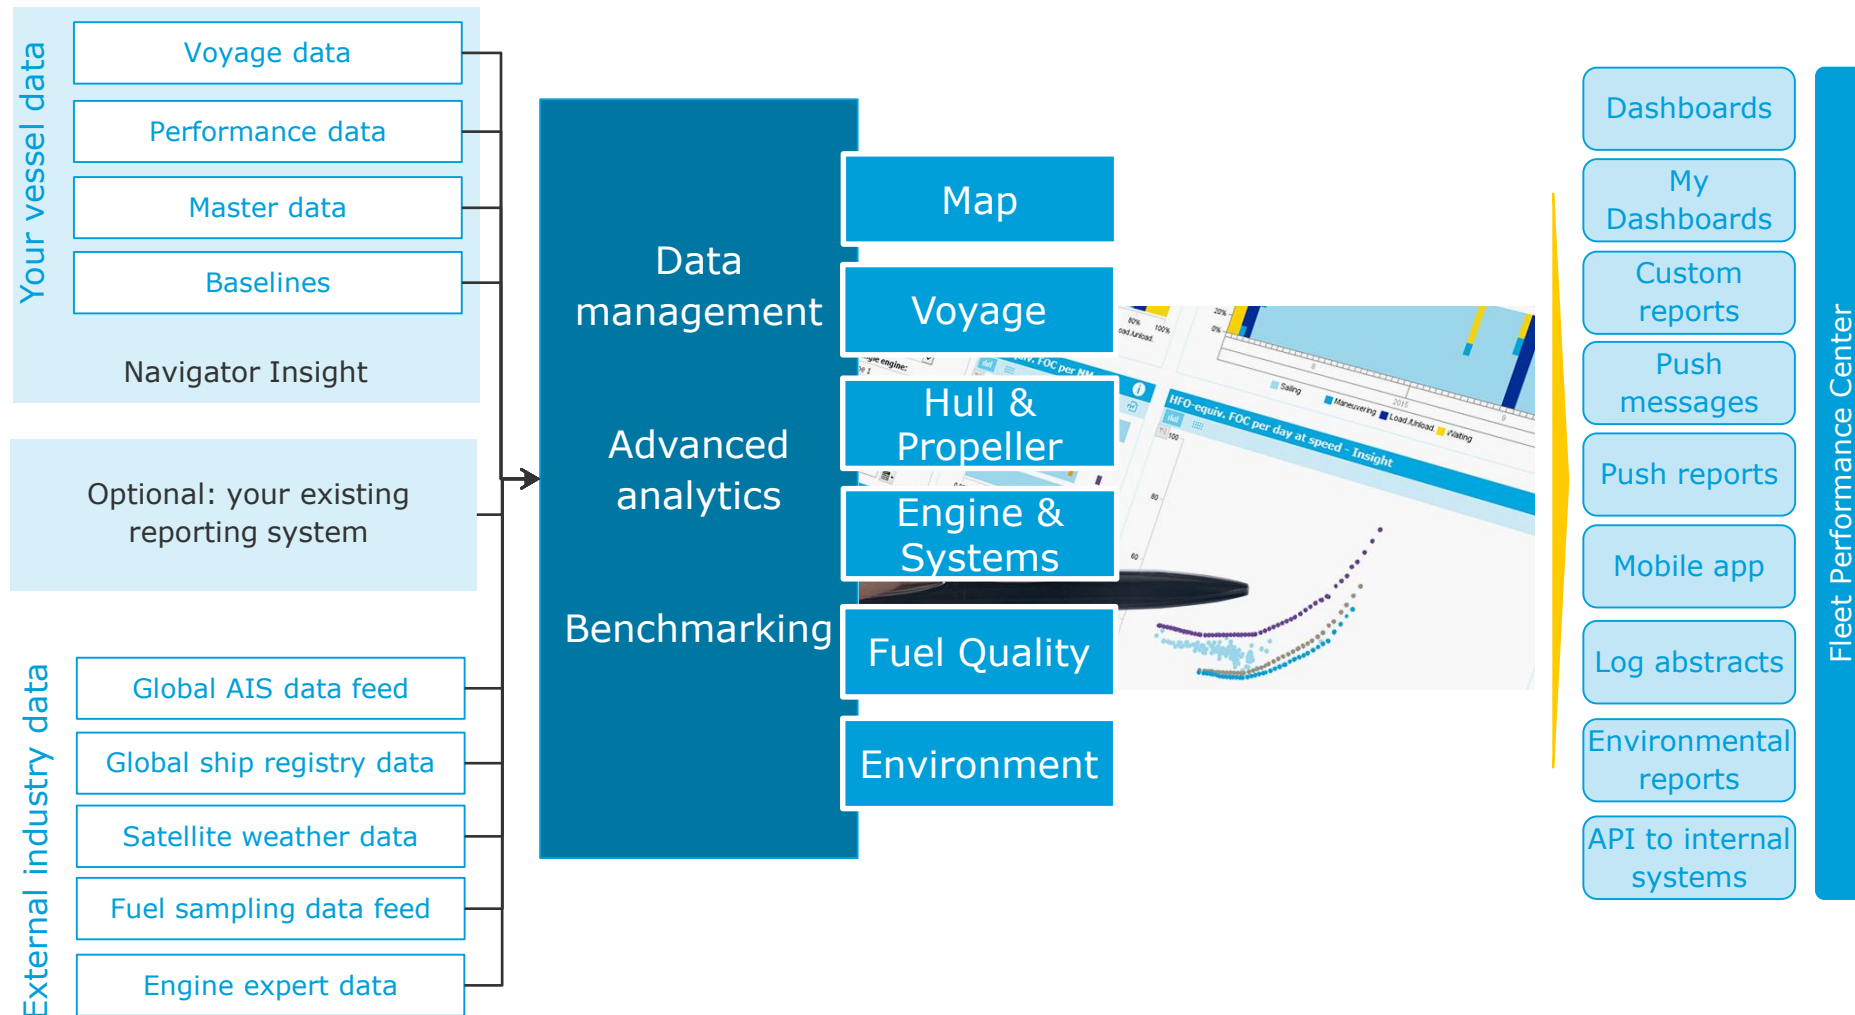

- UTM measurements generate tens of thousands of data points
- **What is a smarter way to manage this hull-related data?**

OR

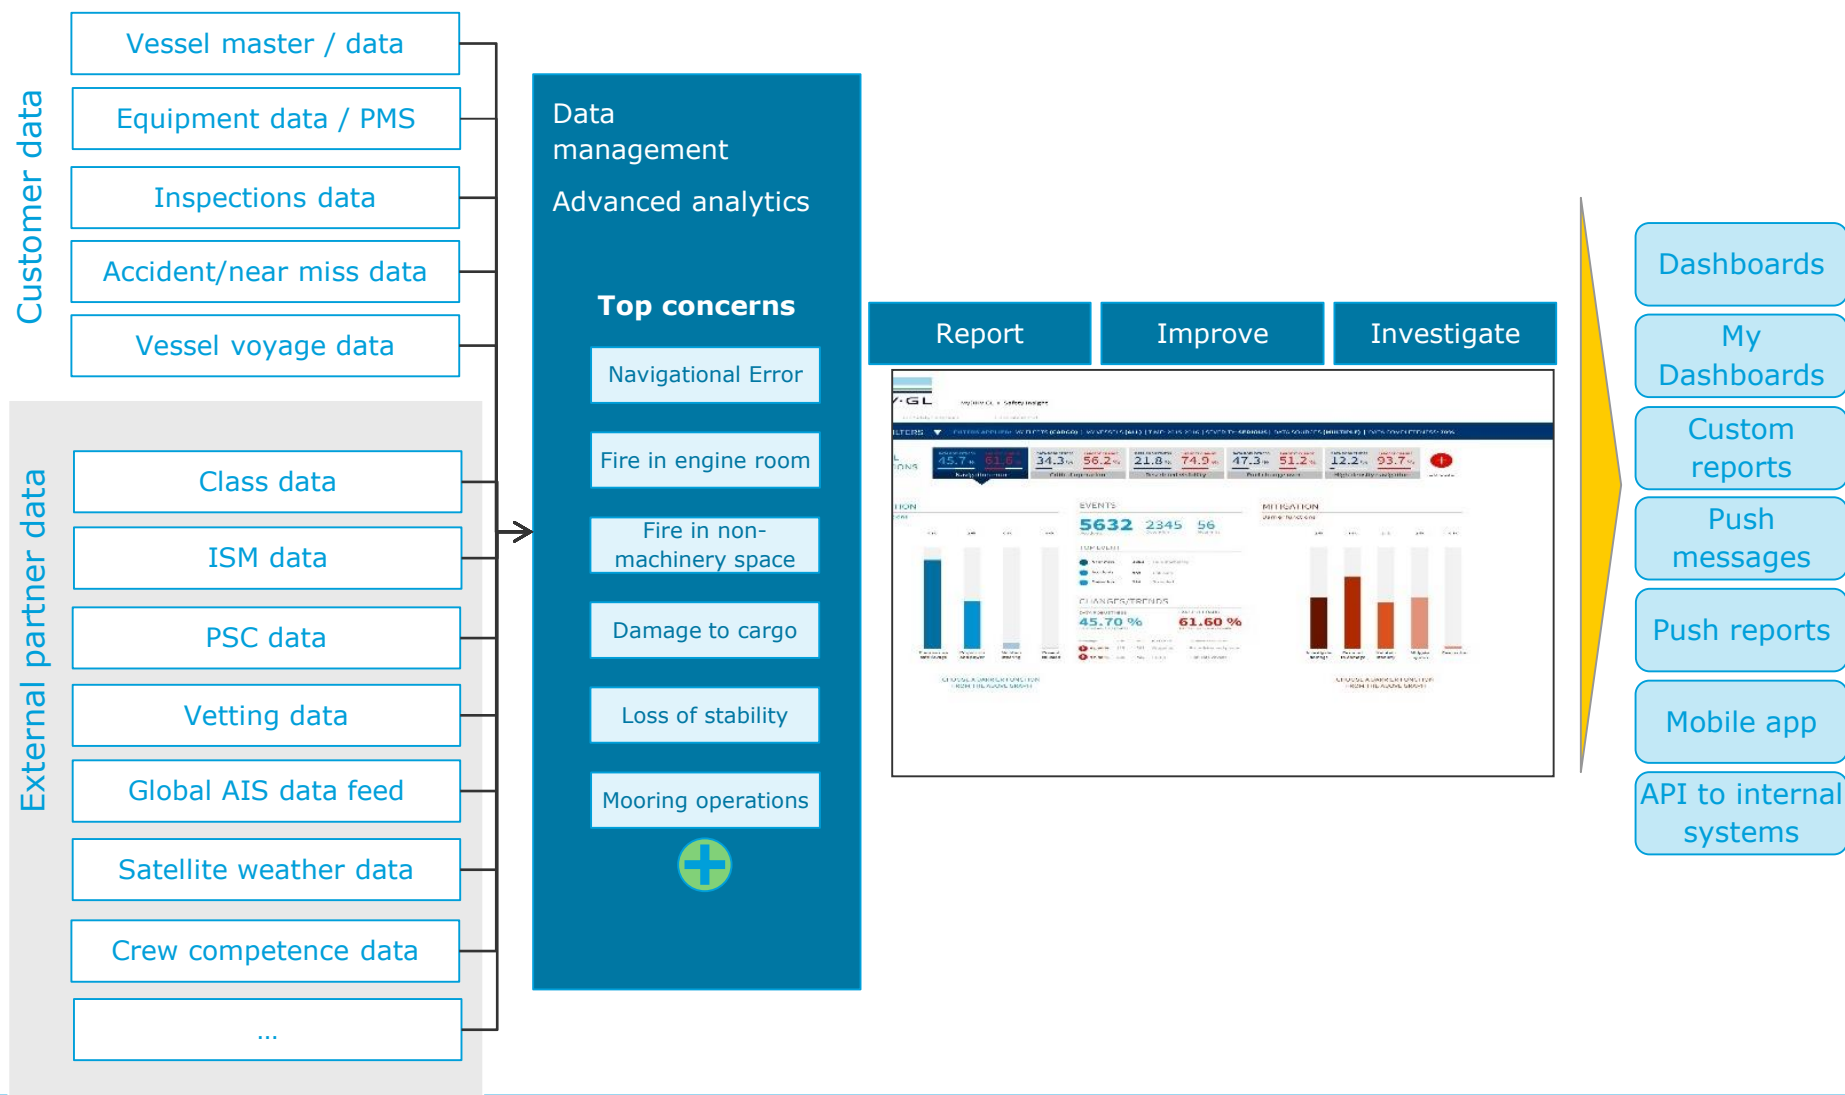

DNV GL solution: ECO Insight is more than just dashboards, it will give outside in view on your performance

Some output formats are only available when Navigator Insight is used as onboard data collection

Our Safety Insight gives you the data perform barrier management digitally

Being cyber security ready has never been more critical

Data and system failures
have direct business impact

- Complexity** of the systems has increased
- Exposure** of the power systems is higher
- Vulnerability** of cyber attacks
- Disruption** can effect systems and societies

Cyber Security Testing of Control Networks

To secure the safety and integrity of industrial control systems by probing these networks for possible vulnerabilities and testing their robustness.

Typical Tests:

- Stress and robustness testing
- Penetration testing and testing of network segregation
- Screening running services, patches and firmware
- Authentication weaknesses
- Portable media security
- Known and unknown vulnerabilities
- Traffic anomalies
- Degradation of networked equipment

Be prepared for the risk of cyber threats

Domain expertise
to bridge the gap
between IT and OT

Comprehensive approach
of cyber-security services

10 years of experience
within cyber security

DNV GL digital strategy: Trust 4.0

Unlocking silos by connecting multiple stakeholders and data sets

Veracity – DNV GL's Data Management Platform

We provide trusted integration, profiling, benchmarking, quality assurance and management of data between providers and consumers

Our unique platform elements

Asset data

Ingest, storage
and integration

Data quality

Assessment

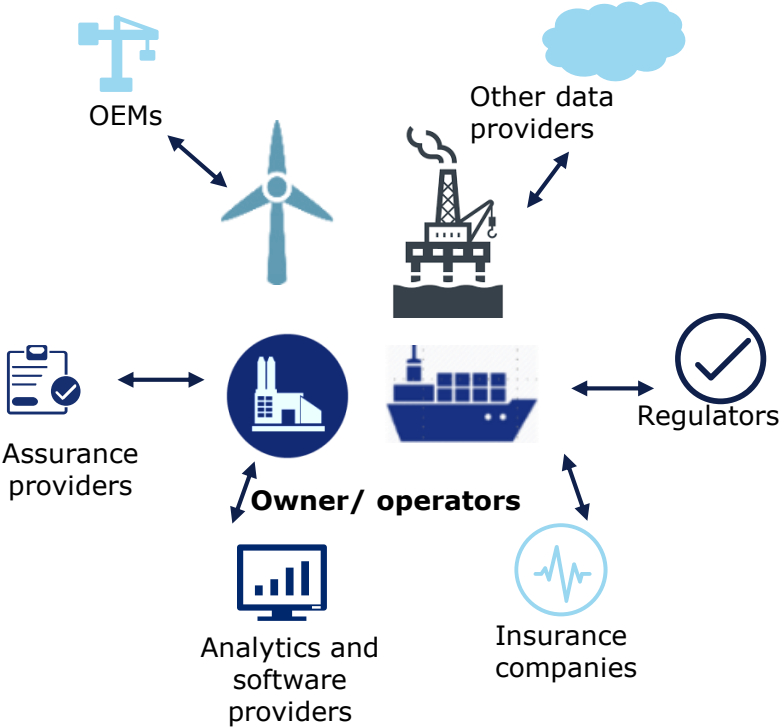

Analytics

DNV GL and third party
analytics providers

Veracity – the ecosystem facilitator

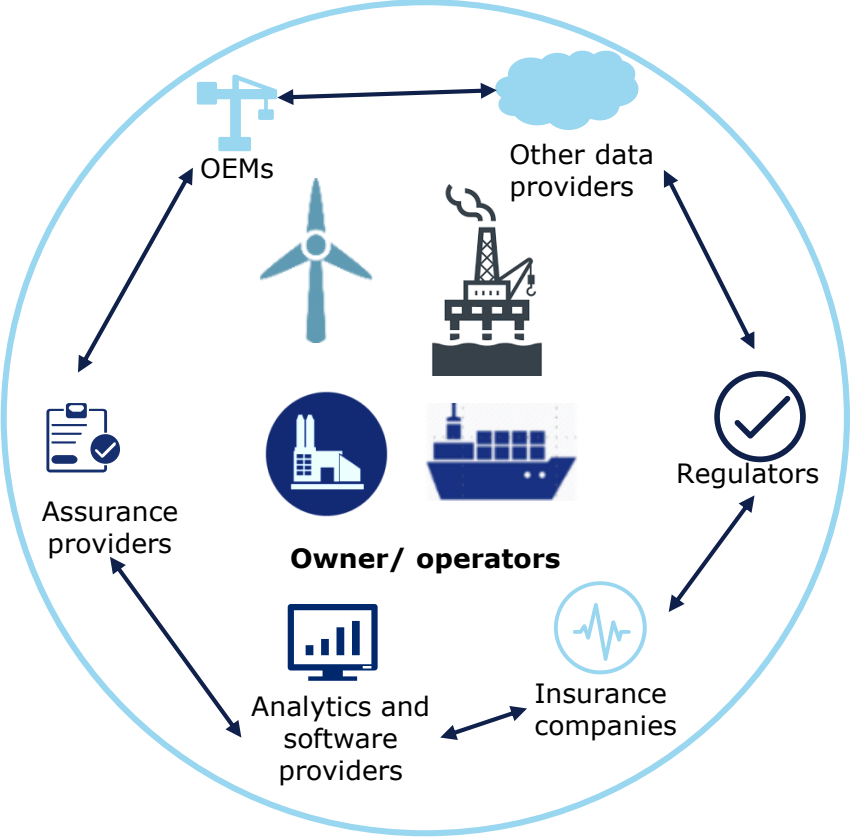

Current situation with data silos

- Limited collaboration with lack of trust

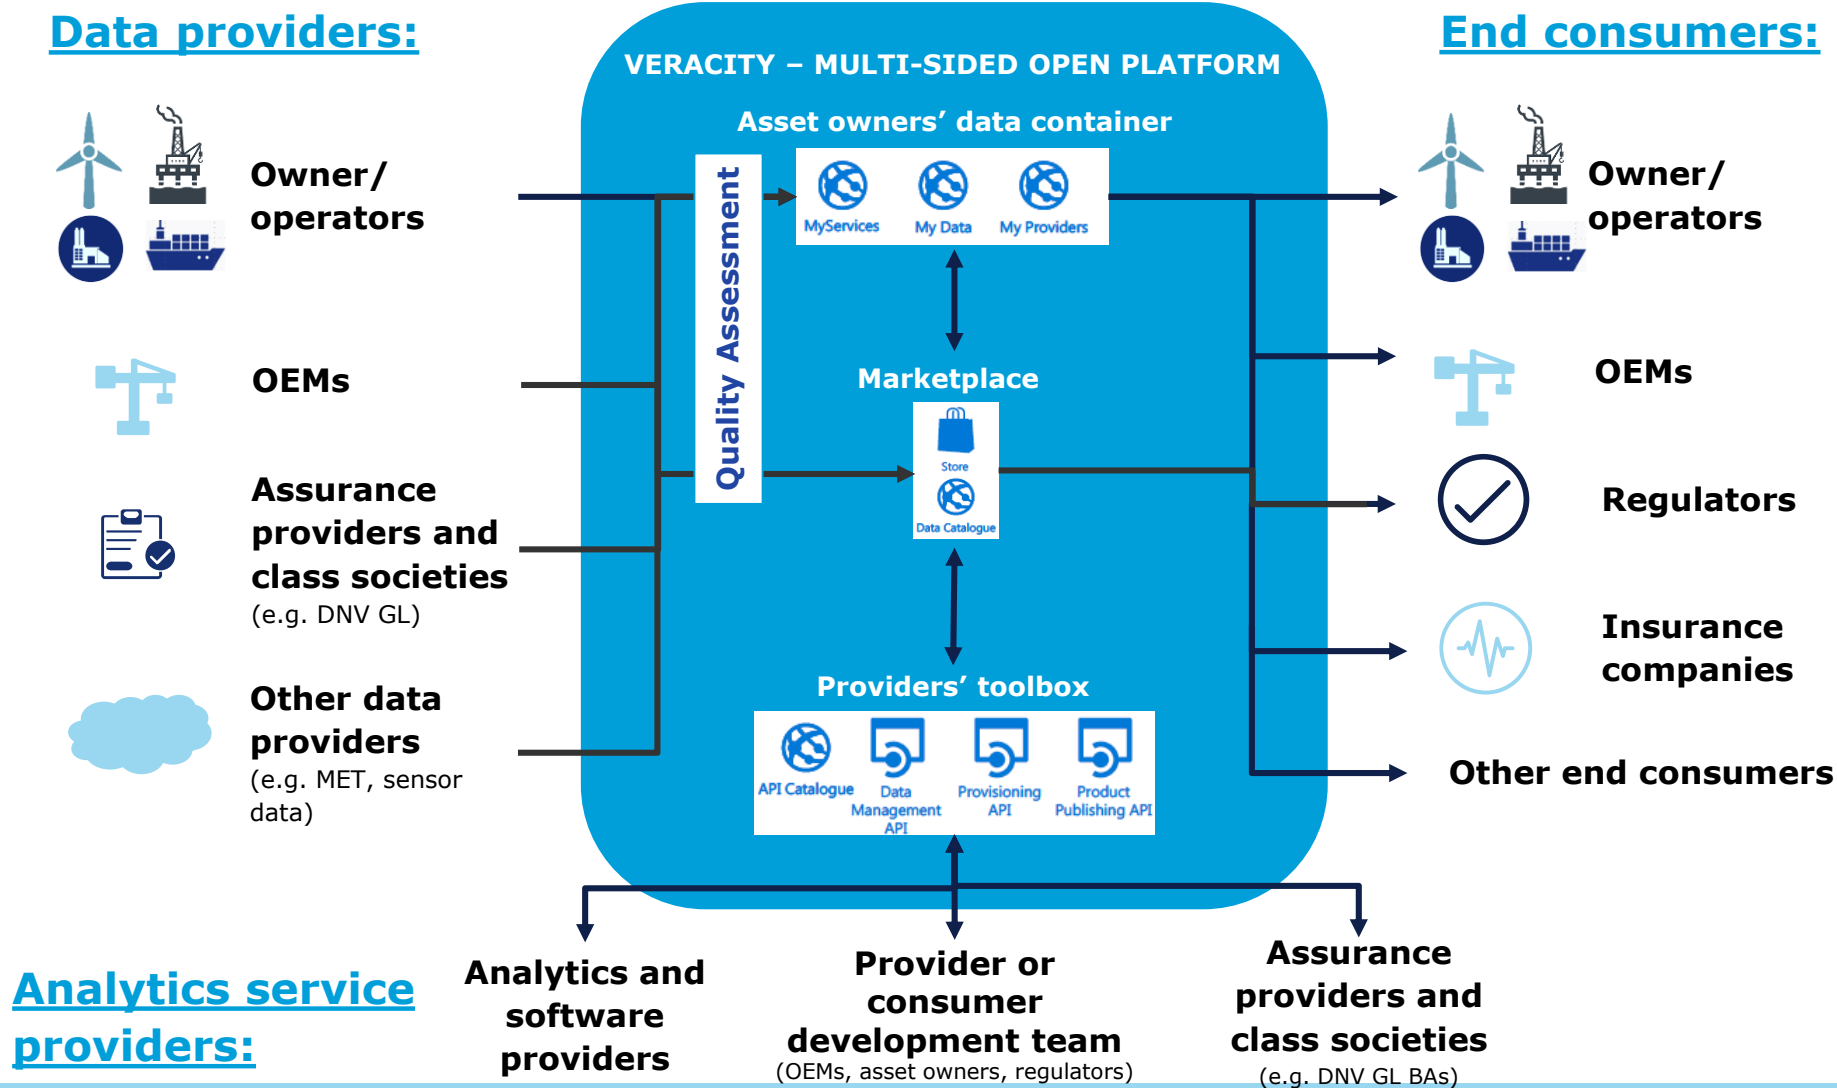

VERACITY as the ecosystem

- Increased collaboration to unlock and enrich value of data

Veracity will create a trusted, value-unlocking eco-system for the players in the core industries

There is a better way to do it - find it!

Thomas Alva Edison

- Use the right tools to support the implementation of your management system(s)
- Overcome typical challenges
- Make better use of information
- Facilitate organizational learning

Thank you

GRIDS BECOME HYBRID
AND MORE COMPLEX
